

Enfidha and Monastir International Airports are major players in the socio-economic development of the Tunisian "Sahel" region.

In compliance with the charter of TAV Airports, the regulations and requirements in force, TAV Tunisie S. A. is committed to operate, develop and maintain both Airports in accordance with the principles of sustainable development.

In order to implement its environmental policy, TAV Tunisie S. A. has undertaken the implementation of an environmental management system that complies with applicable international standards. The Company is committed to the following five principles of environmental management:

1. Comply with environmental laws and regulations;
2. Prevent and minimize environmental impacts associated with the operation of both Airports;
3. Integrate the environmental dimension in all its activities ;
4. Regularly evaluate its environmental performance;
5. Communicate all the results of its performance to the competent authorities, neighboring communities and environmental associations.

Climate change, air quality, rational use of energy, efficient resources saving and waste management are key components in the environmental approach of TAV Tunisie, which is fully committed to reducing its greenhouse gas emissions by having set up a tri-generation facility and opted for renewable energy such as photovoltaic energy.

TAV Tunisie S. A. records and reports its environmental performances in its annual environmental report.

This environmental policy is intended to be extended to all stakeholders of the company as well as to all non-group investees over which the company exercises effective control within the legal limits. It also applies, where applicable, to contractors acting on behalf of TAV Tunisie.

Environment, Health & Safety supervisor provides technical expertise and consulting assistance, in close collaboration and interaction with the management, employees and contractors to secure best environment practice processes throughout the company and assure compliance with legal requirements while projecting on an evaluation approach and continuous improvement of the system efficiency.
